HONDA CVT TRANSMISSION FLUID

DESCRIPTION

Hi-Tec Honda CVT Transmission Fluid is a premium synthetic Continuously Variable Transmission (CVT) fluid designed specifically for use in Honda vehicles requiring Honda specification HMMF (Fluids meeting specification Honda Z1 ATF are no longer recommended for Honda CVT transmissions).

Continuously Variable Transmissions can be chain or belt driven. Chain and belt driven CVTs operate through a torque converter which requires high metal to metal friction characteristics.

However Honda also uses a wet start-up clutch with the torque converter. This means that the transmission fluid for Honda CVTs needs to have excellent anti-shudder performance and durability for the wet clutch as well as high metal to metal friction performance for the torque converter. Because of these varying friction requirements, Honda CVT fluid is generally not suitable for other types of CVT.

Hi-Tec Honda CVT Transmission Fluid has good shear stability which helps maintain the viscosity characteristics of the lubricant. It also has excellent anti-foaming characteristics allowing better power transmission with less lubricant oxidation and component wear, resulting in a prolonged fluid life, generally of 30,000 kms.

APPLICATION

Hi-Tec Honda CVT Transmission Fluid is specifically for use in Honda vehicles requiring CVT transmission fluid meeting Honda specification HMMF.

Honda CVT fluid is not suitable for other types of CVT especially Toyota and Ford Hybrids and chain driven CVTs (e.g. VW, Audi, Subaru, Ford CVT-30).
